India’s Only Genuine Wooden Plank Tiles Expert

- exporting excellence across 30+ countries
- sustainable surfaces, smarter manufacturing
- progressive designs, responsible choices
- raising the décor surface benchmark
- built on ethics, backed by quality

Metro Group is a dynamic collective driven by vision, design excellence, and customer trust. As a group, we believe great surfaces shape meaningful spaces and lasting impressions. Our journey is guided by creativity, quality commitment, and a passion to deliver versatile ceramic solutions that elevate everyday living across diverse markets worldwide.

Innovation and care for the planet inspire our path forward. Metro Group focuses on Wooden Tiles crafted without using wood, preserving natural resources while delivering authentic wood feel, warmth, and timeless beauty. This thoughtful approach blends sustainability with aesthetics, helping create responsible spaces that respect nature while enriching modern lifestyles for generations.

Metro Group stands as a unified force committed to precision, consistency, and progressive manufacturing. Our production strength is powered by globally trusted machinery from Sacmi, LB, KEDA, System Ceramics, HLT, and Nade, enabling refined quality, uniformity, and dependable output across every collection we create.

Innovation drives our evolution, guiding us to develop surfaces that balance design and responsibility. With care for the planet, we focus on Wooden Tiles crafted without using wood, preserving natural resources while delivering the authentic warmth, texture, and timeless appeal of real wood for modern spaces.

Our value system is rooted in integrity, quality, and long term relationships. We prioritize customer satisfaction, transparent practices, and consistent excellence, ensuring every Metro surface reflects trust, durability, and a commitment to responsible growth.

Authentic By Nature And Format

Long, linear, and intentional, the 200×1400 mm plank follows the natural language of wood. Its proportion reflects how wood grows and stretches, creating seamless visual flow across spaces. This elongated format enhances continuity, making interiors feel larger, calmer, and more organically connected.

Its authenticity comes from how it is made. Not cut from larger slabs, but crafted in its true size with curved edges. The non rectified curved edges preserve subtle variations, bringing a natural irregularity that mirrors real wood planks.

This is more than a tile format. It is a philosophy of staying true to nature's form. Every plank carries warmth, depth, and individuality, delivering a genuine wooden experience with the durability and performance of modern surfaces.

Architects choose materials that flow with their design thinking. The 200×1400 mm plank works because it follows natural wood proportions. Long, seamless, and calming. It reduces visual breaks and makes spaces feel larger and more connected.

What truly sets it apart is how it is made. Not cut from bigger tiles, but created as a plank itself. The non rectified edges bring slight irregularity, giving it a more natural and authentic wooden feel.

For architects, it becomes a reliable choice. Real wood aesthetics with modern performance. Clean, practical, and beautifully honest. It fits across spaces effortlessly, maintaining warmth while ensuring durability, consistency, and long term design integrity.

- This elongated shape brings dynamic vibe across the flooring.
- It truly make space look larger and more natural.

Trees Over Timber

Caring for the planet is no longer a choice, it is a responsibility. Rapid urban growth, rising pollution, and continuous cutting of trees for wooden planks are putting serious pressure on our environment. Forest depletion disturbs ecological balance, increases carbon levels, and weakens natural systems that sustain life. Traditional wood based materials, though beautiful, often come at the cost of long term environmental damage. Today, conscious design and responsible material selection matter more than ever, as spaces must not only look good but also respect nature and future generations.

With this vision, we created Wooden Plank Tiles that deliver the warmth and authenticity of natural wood without using actual wood. By eliminating tree cutting, these tiles help preserve forests while offering durability, easy maintenance, and long lasting performance. Advanced surface detailing recreates the texture, grain, and comfort of real wood, bringing natural aesthetics into modern spaces responsibly. This approach allows designers and homeowners to enjoy the beauty of wood while supporting sustainability, reducing environmental impact, and building spaces that are both elegant and environmentally responsible.

Every choice we make today shapes the air we breathe tomorrow. Surfaces are not only about style, they are about values. When design decisions become mindful, interiors start telling a better story, one of responsibility, balance, and respect for what is real and irreplaceable.

Wooden Plank Tiles bring that calm, earthy warmth into homes, hotels, and workspaces while staying practical for modern life. They offer the look people love, with the strength, stability, and easy upkeep that everyday spaces demand.

For architects and homeowners, this becomes a simple shift with a powerful impact. A wood feel floor that does not demand wood is design progress. Because the most beautiful spaces are the ones that leave nature intact, and still feel wonderfully alive.

A Choice

That Protects The Future

Each Square Meter of Metro Wooden Tile Means:

- More trees preserved
- More carbon captured in forests
- More biodiversity protected

Good Design Is Thoughtful.
Great Design Is Responsible.

Every square meter of Metro wooden tile used on floors or walls represents a conscious decision to reduce pressure on forests. Traditional hardwood extraction typically yields around 20 to 25 square meters of finished material from one mature tree. By replacing natural wood with advanced porcelain technology, Metro helps preserve that tree entirely. A single mature tree can absorb nearly 20 kilograms of carbon dioxide per year, continuing to capture carbon instead of being cut down for interiors.

Compared to conventional hardwood processing and long distance timber transport, which can embody approximately 30 to 60 kilograms of carbon emissions per square meter, Metro wooden tiles can reduce embodied carbon impact by an estimated 25 to 40 percent depending on scale and specification.

Beyond carbon savings, Metro supports biodiversity and long term ecological balance. Forests hold close to 80 percent of terrestrial biodiversity, and lowering wood demand directly supports habitat protection.

Designed for both flooring and wall applications, Metro tiles offer a lifecycle that often exceeds 25 years without warping, polishing, or replacement, significantly reducing renovation waste and material turnover.

The result is a versatile surface solution that delivers the warmth of wood across entire spaces while minimizing environmental strain.

Recovering Waste, Reducing Footprint, Raising Standards

From production to packaging, Metro reduces waste, recovers usable process material, optimizes resources, and builds durable surfaces that stay beautiful for years while supporting responsible choices across projects.

Metro follows a circular economy approach where resources stay in use for longer, and waste is designed out of the system.

Our wood look tiles deliver the warmth of timber without using natural wood, helping reduce demand on forests. In production, Metro targets up to 95 to 100 percent process water recirculation through closed loop reuse, and recovers most mineral process scrap back into the batch wherever technically possible.

Long product life also matters: a durable tile surface can stay in service for 25 years or more, which lowers replacement cycles and reduces renovation waste across the lifetime of a space.

Our responsibility goes beyond the factory floor. Metro is committed to certified green practices and transparent compliance, backed by documentation such as recycled content reporting, indoor air quality focused product standards, and lifecycle disclosures where applicable. We also work toward waste smart packaging, with targets like 20 to 30 percent reduction in packaging material through optimized cartons and palletization, and increased recyclability by using mono material paper based packs wherever feasible. The goal is simple: less waste generated, more waste recovered, and a supply chain that supports people, safety, and continuous improvement.

A True

Expression of Wood

Craftsmanship At Its Peak

- Deliver Genuine Wooden Feel
- Feel premium, Perform stronger, Last Longer

Craftsmanship At Its Peak reflects our commitment to precision, discipline, and attention to every detail. Each tile is created with a clear focus on quality, proportion, and surface perfection, ensuring a refined and consistent finish across every plank and pattern.

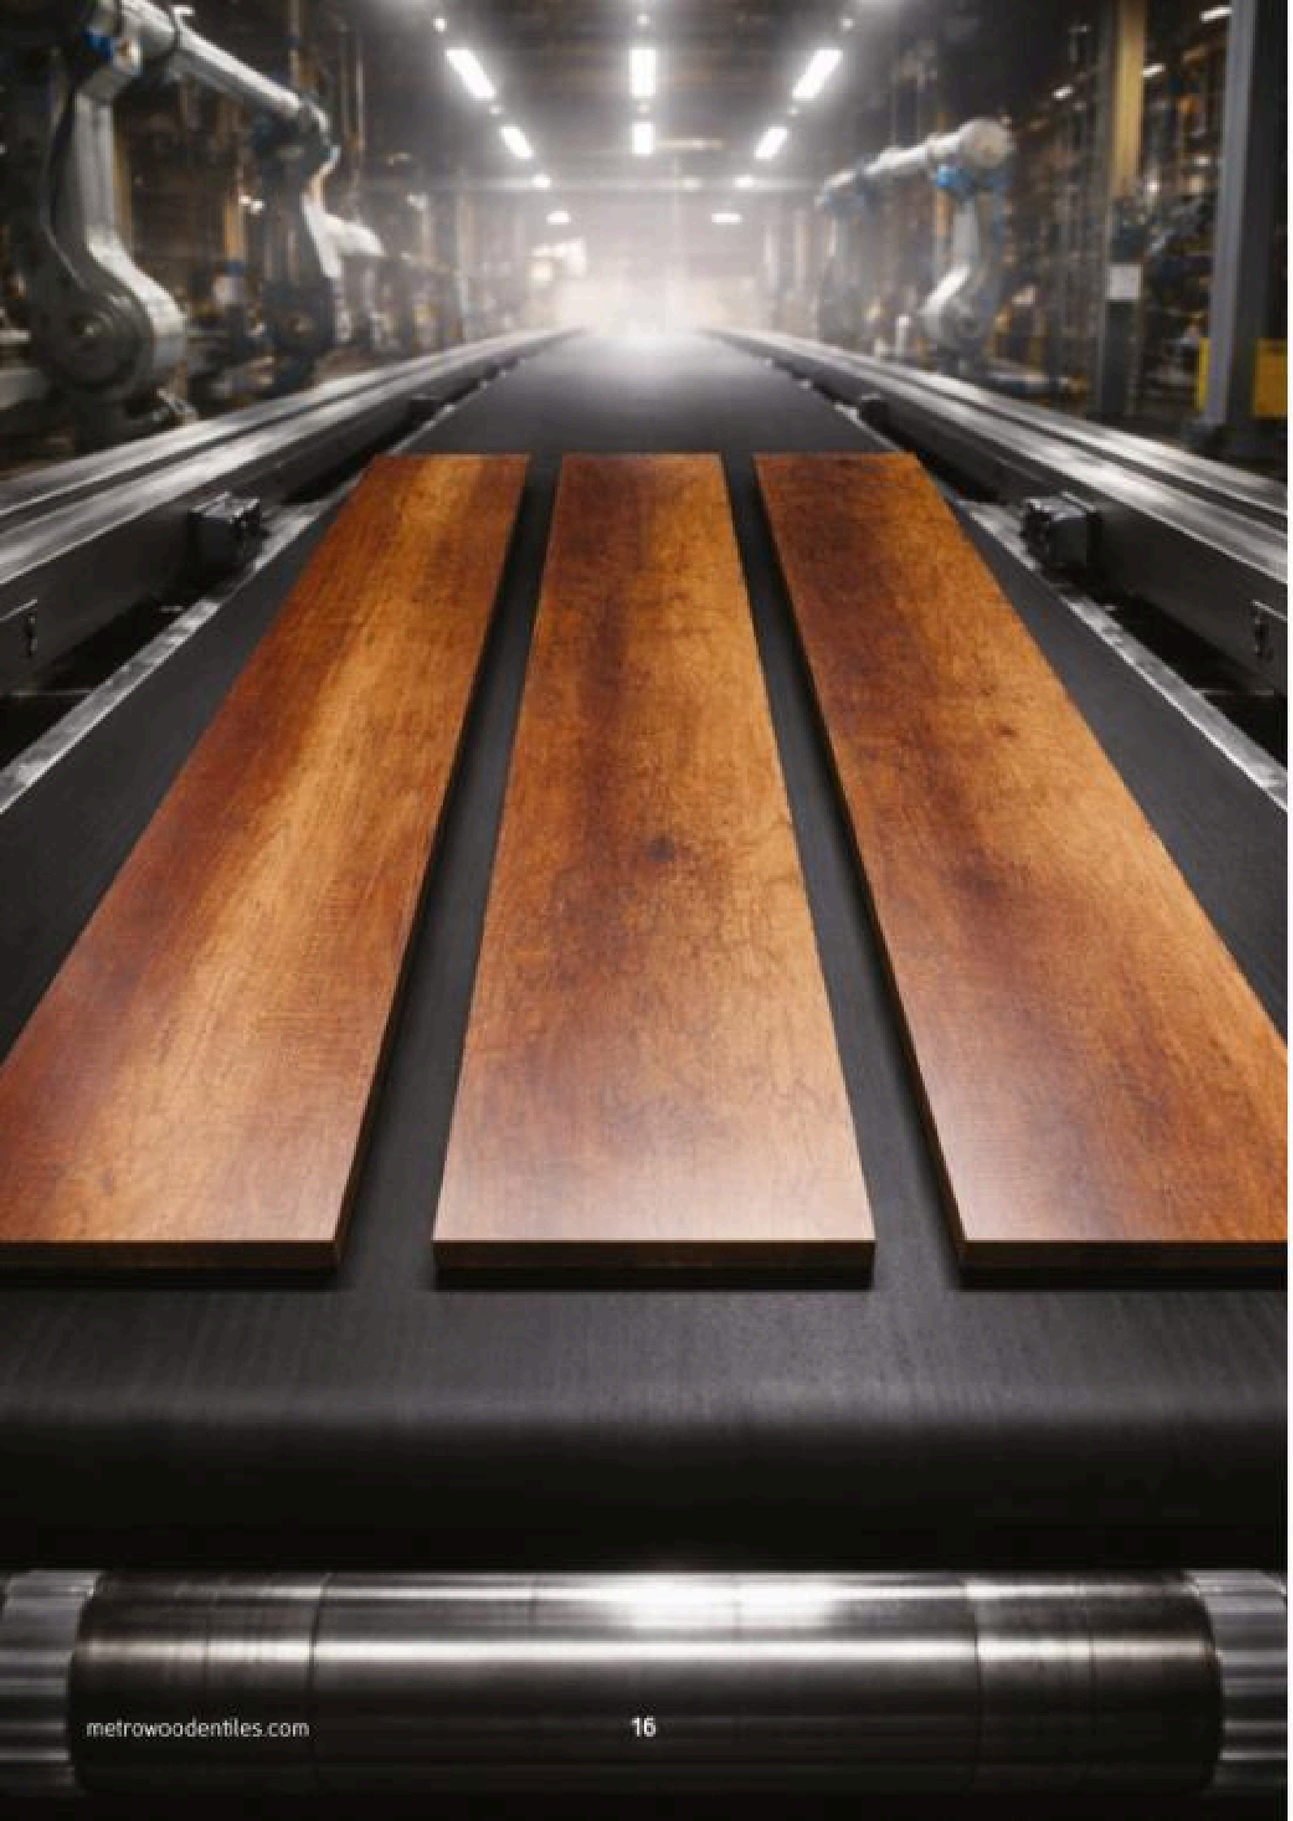

From careful material selection to controlled production, every stage is guided by expertise and experience. Accurate shaping, balanced structure, and smooth finishing work together to deliver tiles that feel strong, stable, and visually flawless in every setting.

Our collection is a result of this dedicated craftsmanship. Perfect angles, clean edges, and seamless alignment ensure the pattern flows continuously, creating harmony and elegance across the surface without visual breaks or irregularities.

Beyond appearance, craftsmanship also means performance. These tiles are built for durability, resistance, and long lasting stability, making them suitable for both residential and commercial spaces that demand reliability with beauty.

True craftsmanship is where art meets responsibility. It is about creating surfaces that not only look exceptional today but continue to perform and inspire for years. With this philosophy, every tile becomes a reflection of care, precision, and timeless quality.

Manufacturing Expertise To Replicate Genuine Wood Shades

- Twelve distinct colors with textures that mirror natural wood depth
- From soft tones to deep shades, crafted for every space.

Curve Edge

Soft curved edges recreate the natural contour of real wooden planks, reducing sharpness and adding authenticity. They enhance seamless joints, deliver a handcrafted feel, and bring warmth with visually natural transitions.

Our wooden plank tiles are engineered to capture the warmth and character of real wood. Every shade is thoughtfully developed to reflect authentic grains, tones, and natural imperfections that bring spaces to life with timeless appeal.

With Twelve versatile color options, the collection moves seamlessly from soft, subtle hues to rich, dark expressions. This range allows designers to create moods that feel calm, bold, or deeply sophisticated.

Multiple textures add another layer of realism, offering surfaces that not only look natural but feel convincingly tactile. Each finish is carefully refined to replicate the depth and movement of genuine wood.

Backed by precise manufacturing expertise, these tiles deliver consistency, durability, and design flexibility. They are crafted to elevate interiors with the beauty of wood, without compromising on performance.

Professionally Preferred Dimension

- This format size brings a natural appeal across the decor due to its elongated size.
- Perfect dimensions ensure seamless application across walls and floors.

Finiture / Finish
Satin Texture & Satin Plain

Formati / Sizes
200x1400mm

Spessori / Thickness
09mm

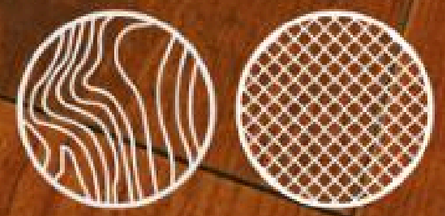

Designed in a striking 200x1400 mm plank size, these tiles bring a strong sense of scale, continuity, and elegance to any space. The long format creates a smoother visual journey, making interiors feel more open, balanced, and architecturally refined.

Inspired by the true character of natural wood, these tiles capture its warmth, depth, and grain richness with remarkable authenticity. The elongated proportion feels closer to real timber planks, giving spaces a more genuine and premium wooden expression.

What makes this format even more special is its natural plank identity. Instead of looking fragmented, the 200x1400 mm size creates broader, cleaner stretches across the floor or wall, reducing visual interruptions and enhancing overall harmony.

Professionals prefer this size for flooring because it delivers a spacious, seamless effect with fewer joints in view. It helps create a calmer, more luxurious layout while supporting beautiful installation patterns that feel intentional and sophisticated.

Equally powerful on walls, the 200x1400 mm format adds length, character, and a refined design statement. Architects value it for its ability to bring real wood aesthetics, strong visual flow, and modern surface performance together in one elegant solution.
