India’s Only Genuine Wooden Plank Tiles Expert

- exporting excellence across 30+ countries
- sustainable surfaces, smarter manufacturing
- progressive designs, responsible choices
- raising the décor surface benchmark
- built on ethics, backed by quality

Metro Group is a dynamic collective driven by vision, design excellence, and customer trust. As a group, we believe great surfaces shape meaningful spaces and lasting impressions. Our journey is guided by creativity, quality commitment, and a passion to deliver versatile ceramic solutions that elevate everyday living across diverse markets worldwide.

Innovation and care for the planet inspire our path forward. Metro Group focuses on Wooden Tiles crafted without using wood, preserving natural resources while delivering authentic wood feel, warmth, and timeless beauty. This thoughtful approach blends sustainability with aesthetics, helping create responsible spaces that respect nature while enriching modern lifestyles for generations.

Metro Group stands as a unified force committed to precision, consistency, and progressive manufacturing. Our production strength is powered by globally trusted machinery from Sacmi, LB, KEDA, System Ceramics, HLT, and Nade, enabling refined quality, uniformity, and dependable output across every collection we create.

Innovation drives our evolution, guiding us to develop surfaces that balance design and responsibility. With care for the planet, we focus on Wooden Tiles crafted without using wood, preserving natural resources while delivering the authentic warmth, texture, and timeless appeal of real wood for modern spaces.

Our value system is rooted in integrity, quality, and long term relationships. We prioritize customer satisfaction, transparent practices, and consistent excellence, ensuring every Metro surface reflects trust, durability, and a commitment to responsible growth.

Chevron Impact On Spatial Perception

Chevron is a distinctive V shaped tile layout that instantly adds direction, rhythm, and visual energy to a room. Because the pattern aligns in a continuous flow, it naturally guides the eye forward, creating a clean, organised look with a designer finish. The result feels structured yet dynamic, turning a simple floor or wall into a statement surface.

What makes Chevron truly special is its ability to change the way a space is perceived. The repeated V lines create perspective and depth, making rooms appear longer, wider, and more open. It also helps define zones in open layouts, subtly leading circulation and making the entire area feel more planned and premium.

Whether used in living rooms, bedrooms, corridors, boutiques, or feature walls, Chevron adds elegance without needing extra décor. It blends seamlessly with modern, classic, and contemporary styling, while the pattern itself becomes the highlight. With Chevron, every step feels like it is moving through a space that is thoughtfully designed, balanced, and visually elevated.

Chevron works on visual direction and perspective. The repeated V formation guides the eye forward, creating a sense of movement and continuity. This directional flow reduces visual breaks and makes surfaces feel organised, balanced, and visually longer.

From a spatial science viewpoint, Chevron influences perception of scale. The angled lines generate depth and perspective, helping narrow spaces feel wider and compact areas appear more open. This optical expansion creates a structured yet dynamic environment without adding physical elements.

Architects and designers choose Chevron for its ability to combine function with aesthetics. It defines zones, enhances circulation flow, and adds character without overwhelming the space. The pattern suits modern and classic interiors, offering timeless elegance, visual rhythm, and a premium architectural statement.

- Chevron shape brings a natural sense of movement
- Chevron plank tiles makes spaces feel larger.

Trees Over Timber

Caring for the planet is no longer a choice, it is a responsibility. Rapid urban growth, rising pollution, and continuous cutting of trees for wooden planks are putting serious pressure on our environment. Forest depletion disturbs ecological balance, increases carbon levels, and weakens natural systems that sustain life. Traditional wood based materials, though beautiful, often come at the cost of long term environmental damage. Today, conscious design and responsible material selection matter more than ever, as spaces must not only look good but also respect nature and future generations.

With this vision, we created Wooden Plank Tiles that deliver the warmth and authenticity of natural wood without using actual wood. By eliminating tree cutting, these tiles help preserve forests while offering durability, easy maintenance, and long lasting performance. Advanced surface detailing recreates the texture, grain, and comfort of real wood, bringing natural aesthetics into modern spaces responsibly. This approach allows designers and homeowners to enjoy the beauty of wood while supporting sustainability, reducing environmental impact, and building spaces that are both elegant and environmentally responsible.

Every choice we make today shapes the air we breathe tomorrow. Surfaces are not only about style, they are about values. When design decisions become mindful, interiors start telling a better story, one of responsibility, balance, and respect for what is real and irreplaceable.

Wooden Plank Tiles bring that calm, earthy warmth into homes, hotels, and workspaces while staying practical for modern life. They offer the look people love, with the strength, stability, and easy upkeep that everyday spaces demand.

For architects and homeowners, this becomes a simple shift with a powerful impact. A wood feel floor that does not demand wood is design progress. Because the most beautiful spaces are the ones that leave nature intact, and still feel wonderfully alive.

A Choice

That Protects The Future

Each Square Meter of Metro Wooden Tile Means:

- More trees preserved
- More carbon captured in forests
- More biodiversity protected

Good Design Is Thoughtful.
Great Design Is Responsible.

Every square meter of Metro wooden tile used on floors or walls represents a conscious decision to reduce pressure on forests. Traditional hardwood extraction typically yields around 20 to 25 square meters of finished material from one mature tree. By replacing natural wood with advanced porcelain technology, Metro helps preserve that tree entirely. A single mature tree can absorb nearly 20 kilograms of carbon dioxide per year, continuing to capture carbon instead of being cut down for interiors.

Compared to conventional hardwood processing and long distance timber transport, which can embody approximately 30 to 60 kilograms of carbon emissions per square meter, Metro wooden tiles can reduce embodied carbon impact by an estimated 25 to 40 percent depending on scale and specification.

Beyond carbon savings, Metro supports biodiversity and long term ecological balance. Forests hold close to 80 percent of terrestrial biodiversity, and lowering wood demand directly supports habitat protection.

Designed for both flooring and wall applications, Metro tiles offer a lifecycle that often exceeds 25 years without warping, polishing, or replacement, significantly reducing renovation waste and material turnover.

The result is a versatile surface solution that delivers the warmth of wood across entire spaces while minimizing environmental strain.

Recovering Waste, Reducing Footprint, Raising Standards

From production to packaging, Metro reduces waste, recovers usable process material, optimizes resources, and builds durable surfaces that stay beautiful for years while supporting responsible choices across projects.

Metro follows a circular economy approach where resources stay in use for longer, and waste is designed out of the system.

Our wood look tiles deliver the warmth of timber without using natural wood, helping reduce demand on forests. In production, Metro targets up to 95 to 100 percent process water recirculation through closed loop reuse, and recovers most mineral process scrap back into the batch wherever technically possible.

Long product life also matters: a durable tile surface can stay in service for 25 years or more, which lowers replacement cycles and reduces renovation waste across the lifetime of a space.

Our responsibility goes beyond the factory floor. Metro is committed to certified green practices and transparent compliance, backed by documentation such as recycled content reporting, indoor air quality focused product standards, and lifecycle disclosures where applicable. We also work toward waste smart packaging, with targets like 20 to 30 percent reduction in packaging material through optimized cartons and palletization, and increased recyclability by using mono material paper based packs wherever feasible. The goal is simple: less waste generated, more waste recovered, and a supply chain that supports people, safety, and continuous improvement.

Architect's Love

Craftsmanship At Its Peak

- Deliver Genuine Wooden Feel
- Feel premium, Perform stronger, Last Longer

Craftsmanship At Its Peak reflects our commitment to precision, discipline, and attention to every detail. Each tile is created with a clear focus on quality, proportion, and surface perfection, ensuring a refined and consistent finish across every plank and pattern.

From careful material selection to controlled production, every stage is guided by expertise and experience. Accurate shaping, balanced structure, and smooth finishing work together to deliver tiles that feel strong, stable, and visually flawless in every setting.

Our Chevron collection is a result of this dedicated craftsmanship. Perfect angles, clean edges, and seamless alignment ensure the pattern flows continuously, creating harmony and elegance across the surface without visual breaks or irregularities.

Beyond appearance, craftsmanship also means performance. These tiles are built for durability, resistance, and long lasting stability, making them suitable for both residential and commercial spaces that demand reliability with beauty.

True craftsmanship is where art meets responsibility. It is about creating surfaces that not only look exceptional today but continue to perform and inspire for years. With this philosophy, every tile becomes a reflection of care, precision, and timeless quality.

Manufacturing Expertise To Replicate Genuine Wood Shades

- From soft tones to deep shades, crafted for every space
- Eight distinct colors with textures that mirror natural wood depth

8 Colours

Oaklore Bianco - Oaklore Cemento - Oaklore Grigio - Oaklore Nero - Oaklore Beige - Oaklore Taupe - Oaklore Walnut - Madera Teak

Our wooden plank tiles are engineered to capture the warmth and character of real wood. Every shade is thoughtfully developed to reflect authentic grains, tones, and natural imperfections that bring spaces to life with timeless appeal.

With eight versatile color options, the collection moves seamlessly from soft, subtle hues to rich, dark expressions.

This range allows designers to create moods that feel calm, bold, or deeply sophisticated. Multiple textures add another layer of realism, offering surfaces that not only look natural but feel convincingly tactile. Each finish is carefully refined to replicate the depth and movement of genuine wood.

Backed by precise manufacturing expertise, these tiles deliver consistency, durability, and design flexibility. They are crafted to elevate interiors with the beauty of wood, without compromising on performance.

Professionally Preferred Dimension

- This format size brings a natural appeal across the decor due to its small size.
- Perfect dimensions ensure seamless application across walls and floors.

Finiture / Finish
Texture Matt

80x450mm Chevron

Spessori / Thickness
08mm

Designed in a versatile 80x450 mm plank size, these tiles bring a refined, linear rhythm to any space. The elongated format enhances visual flow, making areas feel more spacious and well structured.

Inspired by natural wood, these tiles deliver the same warmth and grain detailing without using a single piece of wood. This makes them a smart and responsible alternative for modern design.

Being completely wood free, they support sustainability while maintaining the aesthetic richness of timber. No deforestation, no compromise, just conscious design.

Professionals prefer this size for flooring because it allows flexible layouts like staggered, herringbone, and linear patterns. It adds movement and depth to the surface.

Equally effective on walls, the 80x450 size creates seamless vertical or horizontal applications. Architects love its adaptability, durability, and the ability to unify spaces effortlessly.
